## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election with traverse of Group I, claims 44-49 in Paper No. 11 is acknowledged. The traversal is on the ground(s) that the prior art do not teach the selection of the LCST polymers to lower the surface or interface tension of water. This is not found persuasive because the prior art teaches their polymers themselves. The polymers themselves are the technical feature which link Groups I-IV.

Applicant also traverses on the ground(s) that, in their opinion, the Office has not applied the same standard of unity of inventions as the International Preliminary Examination Authority since the Authority did not take the position that unity of invention was lacking. This is not found persuasive because the PCT international special technical feature standard was the standard by which lack of unity of invention was determined. Under PCT Rule 13.1 and 13.2, the groups lack the same or corresponding special technical feature since the technical feature which links the claims, the polymer comprising water-soluble units and units with a low critical solution temperature, at least, is anticipated by or obvious over several prior art documents, including EP 583814 and EP 629649 (as admitted by applicant in the present disclosure on page 1, lines 15-25 of the spec.). Since the linking technical feature does not provide a contribution to the prior art, unity of invention is lacking.

Applicant is reminded that a holding of lack of unity can be found at any stage during prosecution as the international application, even the national stage.

Art Unit: 1713

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 50-103 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to nonelected inventions, there being no allowable generic or linking claim.

***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 44-49 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

5. Claims 44-49 provide for the use of the polymer, but, since the claims do not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

***Claim Rejections - 35 USC § 101***

6. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

7. Claims 44-49 are rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example Ex parte Dunki, 153 USPQ 678 (Bd.App. 1967) and Clinical Products, Ltd. v. Brenner, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

The elected claims are unsearchable at this time.
